CIRENCESTER GOLF CLUB

About Cirencester Golf Club

Cirencester Golf Club is a well-established local institution situated just outside of Cirencester. The Club can trace its roots back to 1893 and moved to its current location in 1910, where the original course was designed by renowned golf course architect James Braid.

Today, the Club offers an 18-hole course set within 57 hectares of beautiful Cotswold countryside, with the natural landscape providing a challenging and enjoyable experience for golfers of all abilities.

Alongside the course, Cirencester Golf Club provides a range of facilities including a driving range, practice areas, and a welcoming clubhouse with food, drink, and spaces for functions and events.

The Club welcomes both members and visitors, making it an important part of the local sporting community.

PROJECT SUMMARY

BUILDING TYPE
Golf Course, Clubhouse, Pro Shop, and Driving Range

REQUIREMENTS
Comprehensive intruder, fire, CCTV, and Access Control solutions

TECHNOLOGY
- Pyronix Intruder System
- C-TEC Fire Panels
- Dahua Cameras
- Paxton Access Control Systems

TIMELINE
Ongoing partnership of 23 years

Project Objectives

As a busy golf club welcoming members, visitors, staff, and guests throughout the year, Cirencester Golf Club needs reliable fire and security systems to protect its people, property, and facilities.

Over the years, the Club has continued to enhance its systems as its requirements have evolved, with CIA providing solutions across intruder alarms, fire alarms, CCTV, access control, and keyholding. The objective has always been to provide effective, integrated protection while ensuring the systems remain practical for day-to-day use. By regularly reviewing and upgrading its security and safety measures, the Club can respond to changing risks and maintain appropriate protection across the site.

Our Solution

CIA has developed a broad range of fire and security solutions for the Club, selecting established, reliable systems suited to the varying requirements of the site.

Pyronix intruder alarms provide dependable protection for both the Clubhouse and service buildings, while C-TEC fire alarm systems offer dedicated fire detection in each building. Dahua CCTV adds a crucial visual layer of protection, allowing activity around the site to be monitored, while Paxton access control gives the Club greater control over entry to restricted areas.

These systems are supported by regular servicing and maintenance from CIA, alongside fire extinguisher provision and keyholding, giving the Club a comprehensive fire and security solution from one trusted provider.

The Outcome

By continually developing its fire and security systems, Cirencester Golf Club has been able to maintain effective protection as the site and its requirements have evolved.

With CIA looking after its key systems, the Club benefits from reliable, well-maintained protection, greater control over access, and added peace of mind for members, staff, and visitors.

Macmillan Golf Day

Our relationship with Cirencester Golf Club extends beyond the work we carry out there. Each year, the Club hosts our Macmillan Charity Golf Day, bringing together customers, suppliers, local businesses, and players for a fantastic day of golf and fundraising. The Club's support has helped make the event a huge success, with the 2026 event raising a record-breaking £30,600 for Macmillan Cancer Support.

> *"We're so proud of our long-standing relationship with Cirencester Golf Club. From looking after their security systems and sponsoring their scorecards, to hosting our annual Macmillan Golf Day there, it's a pleasure to work with such a valued local organisation."*
