DETECT & PROTECT

CIA Fire and Security offer a wide variety of Covid-19 or New 'Normal' solutions from counting & controlling the flow of people to Thermal temperature checking. To help protect your customers and staff safe, providing peace of mind.

SAFETY

CIA Fire and Security's Ltd.'s Covid-19 solutions are current regulation compliant. These solutions greatly assist with reducing the risk of infection by allowing you to take control of people within a target area to ensure social distancing compliance and aiding the flow control of customers and visitors.

TYPICAL APPLICATIONS

Retail   Supermarkets   School   Banking   Healthcare

THE SOLUTION

Working closely with our suppliers we have been able to provide real-time people counting & flow control solutions to deliver accurate flow statistics utilising the latest available CCTV iVMS technologies.

The system can be configured with screen displays at the entrance of the premises that inform customers and visitors of whether it is safe for them to enter or to wait until someone exits because maximum occupancy has been reached.

People counting is ideal for measuring the number of customers or visitors entering or exiting a location and allows you to effectively monitor those groups within a location & accurately respond to the monitoring events to increase the safety & efficiency for businesses. People counting and flow control can be teamed with our exiting suite of solutions including our thermal that greatly increase the safety of customers and visitors by screening people before allowing them access.

Regulation Compliant   Real-time Alarms   High Accuracy   Protection

PROVIDING PEACE OF MIND
